

# Eucadian Warhawk by Joe Bergmans (December 2008)

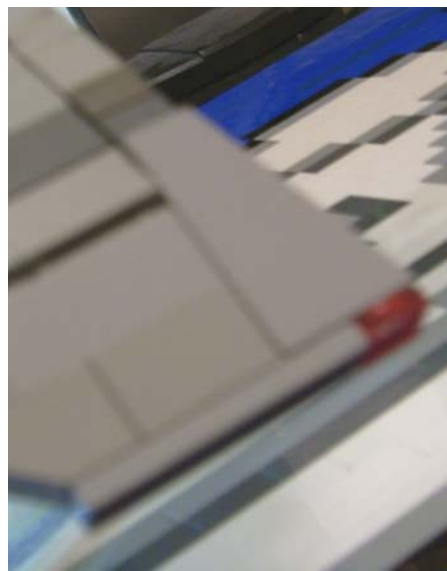

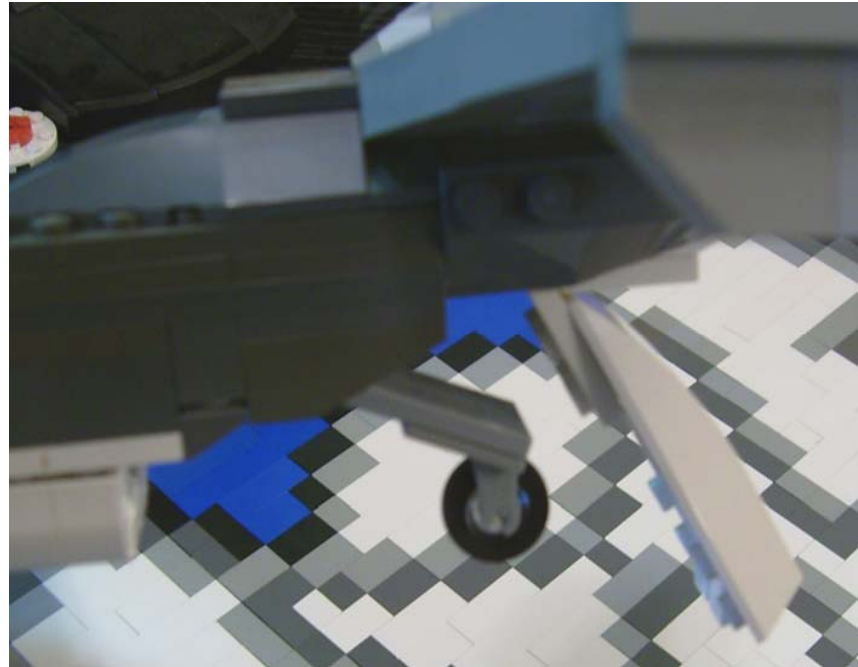

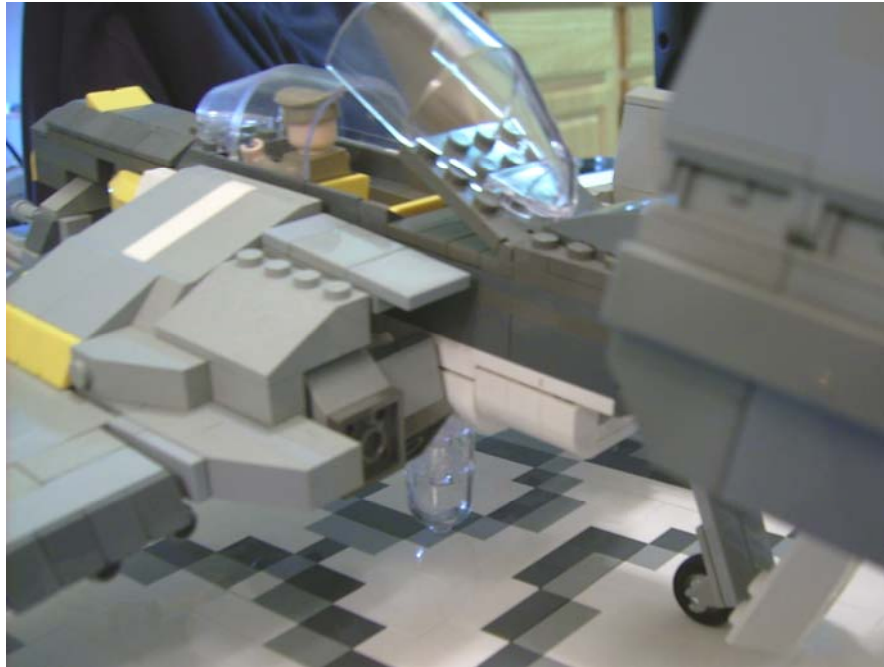

Room for two, control  
stick at pilot position

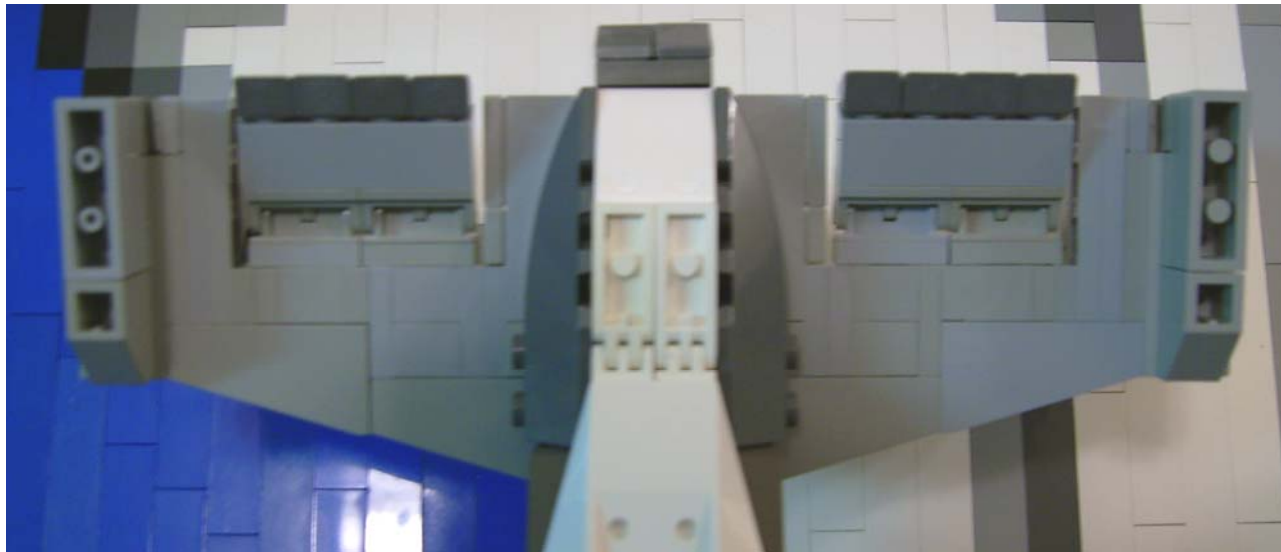

Due to the assembly method for the wings, shaped wall to a flat plate, the weight of the fuselage cannot be supported at three points. A small forward center support is used for these photos. As a result of this method, there is a small discontinuity in the wing by the intake.

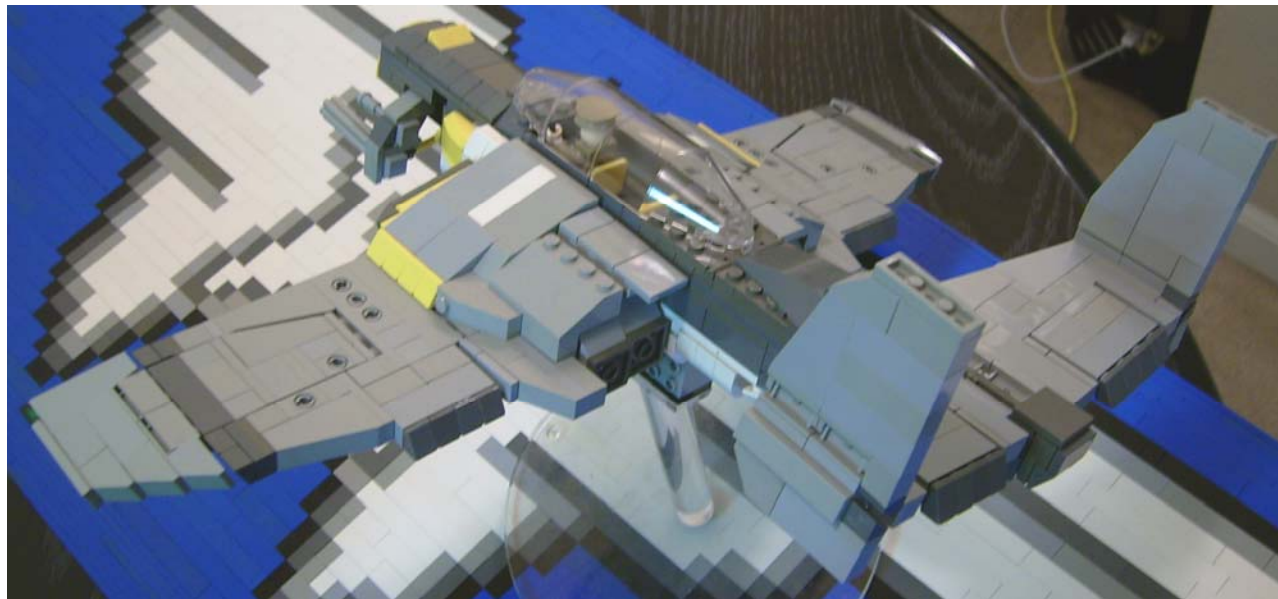

- Hover engines (inner) rotate down
- Rear landing gear is fully retractable (internal slider)
- All four wing flaps move down
- Stud on primary wing flap insures this stays in place for flight mode

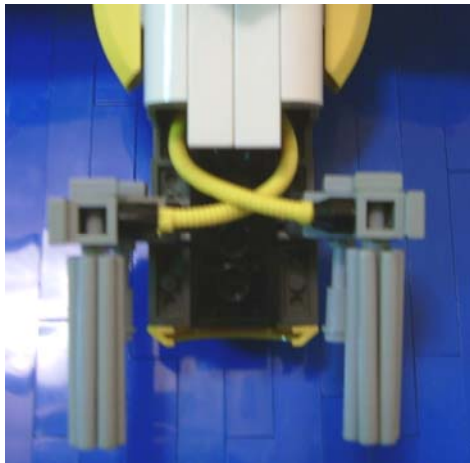

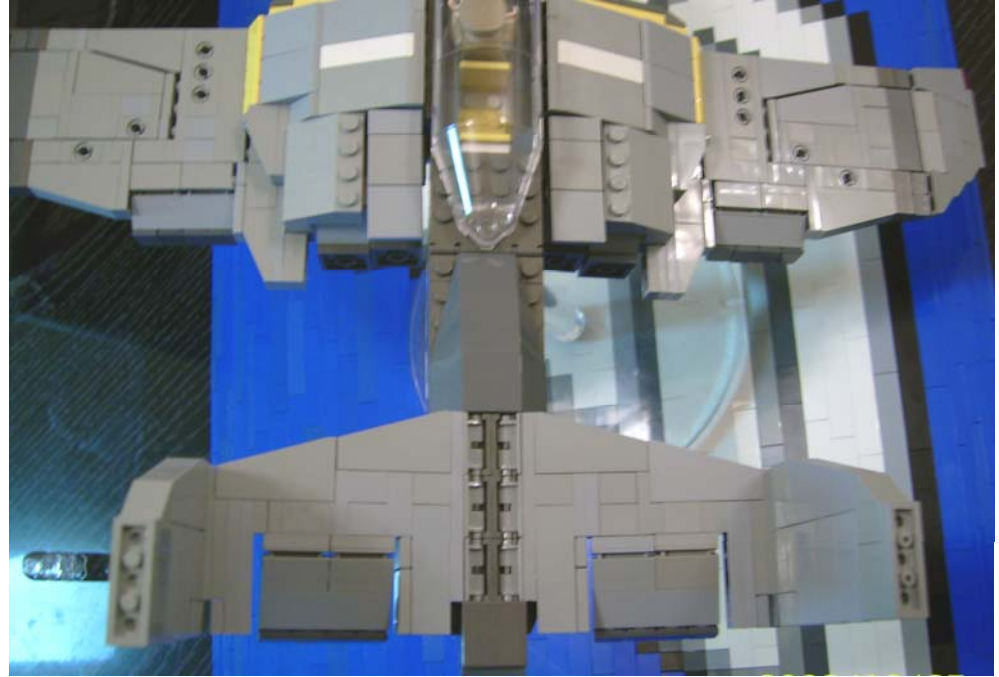

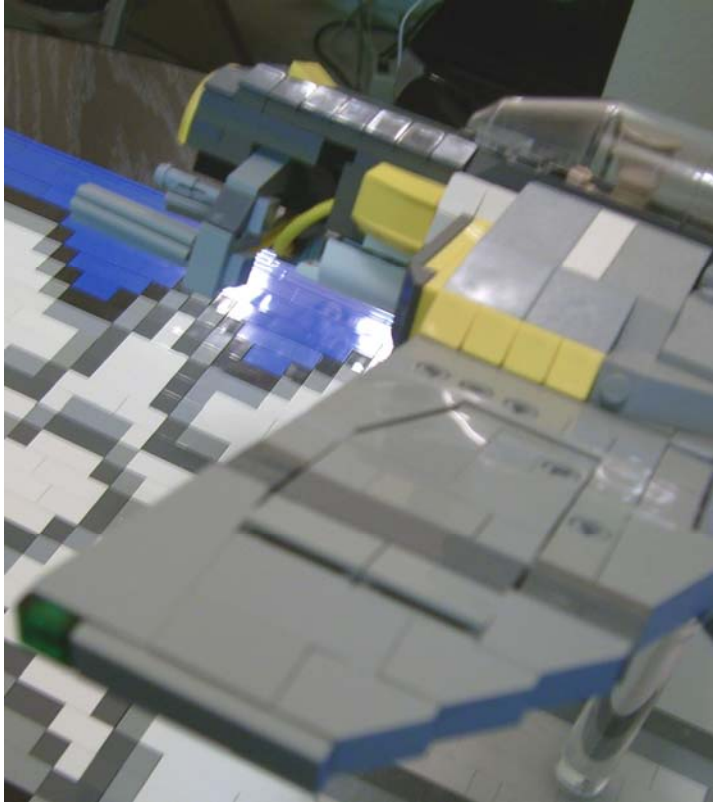

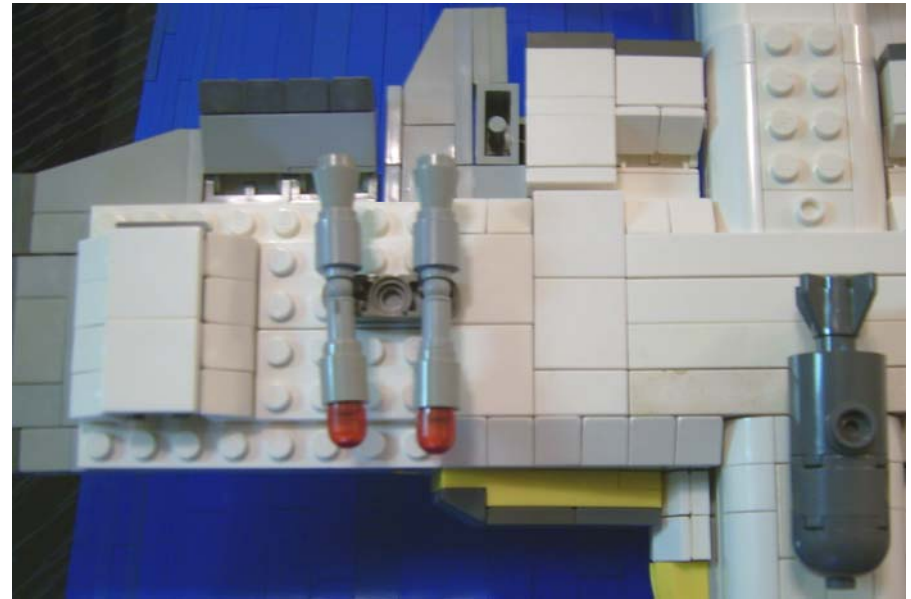

Swarm Missiles

Heavy Missiles

Cluster Bomb

Gatling Guns

Sticker means:  
What will I try to  
use next on my  
opponent?  
Provided I actually  
have all this on  
me.

Sticker does not  
mean:  
I have anger  
management  
issues. It needs  
the other sticker,  
now in  
production, to  
make any sense  
for non-  
Warhawk  
players.

Rear Windshield Sticker !

(Homespun, right side sticker coming soon [Warhawk moniker and Plane])

Thanks for checking this out!
