### Trailblazer on the Cover **Snail moves between leaves**

**Description:** A young snail moves between some dry leaves.

**Location:** Ares, Spain

**Trailblazer Facts:** Snails are a type of gastropod. Gastropods have existed for hundreds of millions of years, making the snail one of the world's earliest known trailblazers. It's also one of the only trailblazers to leave a trail! Snails leave a trail of slime to communicate with other snails and to find their way back to a safe resting place.

# Welcome to Singapore!

1.8

Once a small fishing village, Singapore is now a big city. It is famous for its tall **skyscrapers** and beautiful parks, but what is Singapore really like? Let's take a tour and find out.

## Walk with Dinosaurs

From the airport, you can walk or bike to the city center along the Changi Airport Connector, one of the many bike paths in Singapore. On part of the bike path, called the Jurassic Mile, you'll see dinosaurs!

## A Garden City

Now let's walk in one of the city's many parks. Parks and green spaces are important in all cities. Trees and plants clean the air. They create a cool space to get out of the sun and can be a home for birds and other animals.

The trees in Supertree Grove are tall gardens made by people. Each supertree has more than 150,000 plants inside its trunk. The trees collect energy from the sun and rainwater to use in the park.

In Jurong Lake Gardens, you can play in the Forest Ramble playground. Jurong Lake Gardens is a fun place for a family day out. It has lots of playgrounds and an outdoor skate park.

## Showtime

It's getting late, so let's **visit** the Esplanade. With a big concert hall and **theaters** inside, we can watch shows and plays from around the world. From pop music to puppet shows, it's all at the Esplanade.

The roof of the Esplanade building is very special. The metal window covers move with the sun to keep people cool inside the building. The building also collects rainwater to use in the city.

## Flying High
